

MONITOUCH

V8

series

Safety Considerations

- For safe operation, read the instruction manual or user manual that comes with the product carefully or consult the distributor from which you purchased the product, before using the product.
- Products introduced in this catalog have not been designed or manufactured for such applications in a system or equipment that will affect human bodies or lives.
- Customers, who want to use the products introduced in this catalog for special systems or devices such as for atomic-energy control, aerospace use, medical use, passenger vehicle, and traffic control, are requested to consult the Hakko Overseas Sales Section.
- Customers are requested to prepare safety measures when they apply the products introduced in this catalog to such systems or facilities that will affect human lives or cause severe damage to property if the products become faulty.
- For safe operation, wiring should be conducted only by qualified engineers who have sufficient technical knowledge about electrical work or wiring.

Notes to consider before purchasing

- Appearance and specifications are subject to modification without prior notice due to technical improvements.
- Colors in the catalog may differ from the actual colors due to printing inaccuracies.
- Consult your distributor or us for further information about products in this catalog.

MONITOUCH V8series

For optimal performance, connectivity and usability
The MONITOUCH V8 series has expanded the potential of programmable operator interface panels.

Realize the Ideal

High Performance

The new MONITOUCH series has realized the best possible performance with a newly developed high-speed algorithm and a high level of visibility for efficient operation.

Connectivity

8-way communication with up to eight kinds of devices and two USB channels ensure high compatibility and expandability of your system.

Usability

User-friendly component parts and functional switches enable simple and speedy display configuration.

■ 65,536 colors	■ 30 fps video display in 16 million colors	P10
■ Analog switches		P11
■ Compatible with 8-way communication		P12
■ Equipped with two USB channels (master/slave)		P14
■ Multi-output memory	■ ON delay/ OFF delay	P16
■ Pop-up window	■ Flash ROM 12.5MB/ SRAM 512KB	P17
■ Configuration software V-SFT		P18

Display Features

Improved visibility for operator interface panels

Great power of the visibility facilitates the operation by high-resolution and high-speed video display.

High-resolution Display

65,536 colors*1
(32,768 colors with blinks)

High-resolution display of 65,536 colors without blinks and 32,768 colors with blinks enables clear display of JPG and BMP images. Realistic appearance of photos, illustrations and 3D parts improves visibility and makes it easy for operators to quickly grasp the conditions.

The image shown below is not an actual display image.

*1 Except V806iMD/V806MD

High-level images are displayed in real time without missing any information

Display of 30 fps video images in 16 million colors*2

First in Industry

High-speed displaying of 30 frames per second is possible. Even displays for production of a short tact time can be made without any delay.

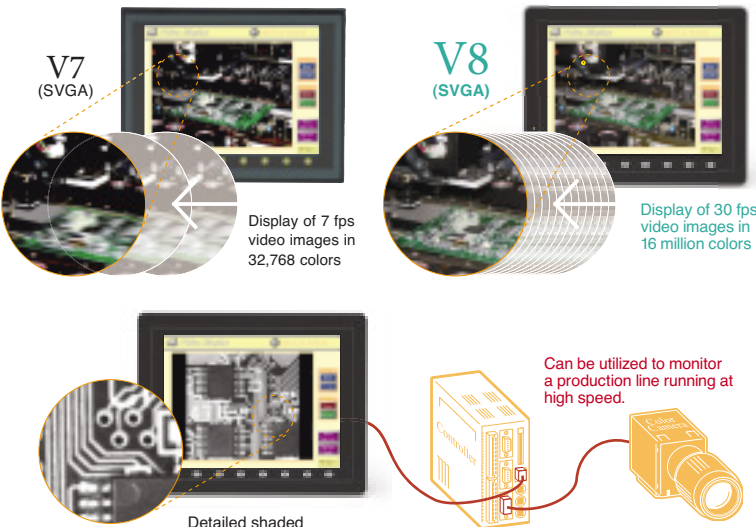

Monochrome display with 256 gradations*2

Monochrome images that are often used by image processor can be displayed more clearly. The reproduction capacity for gradation and pattern-indented surfaces has been drastically improved.

Locating the cause of trouble by monitoring with video

Motion picture facilitates locating the cause of trouble when it occurs.

Available in autumn 2008

*2 For V808iS, 260,000-color displays and 64-gradation monochrome displays are possible.

Clear and smooth letters

The stroke font can be displayed to appear smooth even for magnified characters.

The stroke font is defined by lines. Since it does not depend on the resolution of the device, which is different from the bitmap font, fonts can be magnified or shrunk freely. Unicode enables you to edit the project in various languages.

Language		Japanese	English/ European	Traditional Chinese	Simplified Chinese	Korean	Central European	Cyrillic	Greek	Turkish	Unicode(UTF-8)
Bitmap font	Non-gothic	●	●	●	●	●	●	●	●	●	●
	Gothic	● Gothic/Gothic (IBM extension)	● Gothic (Mincho)	×	×	×	×	×	×	×	×
Stroke font		●	●	●	●	●	●	●	●	●	

Operation Features

"User-oriented operability" by high-speed and smooth display

High-speed accelerator and algorithm ensure stress-free operation.

Free switch layout with analog resistive switches

Analog resistive switch

Analog resistive switches are used for MONITOUCH. Freer switch layout facilitates screen designing while more intensive operation display can be produced.

Matrix resistive switch

Switches are detected by block.

When moving the button

The button can be arranged only along the specified grid line

Analog resistive switch

Switches are detected by dot.

When moving the button

The switch detection area can be moved freely along with the button

*The area outside the dotted lines is not detected.

Slider switch

Available in summer 2008

Slider switches enable data entry without inputting data using the numeral key pad. Values can be modified easily and quickly, even for a fine adjustment.

Scroll bar

Available in summer 2008

The desired item can be selected by the scroll bar in the same manner as with the Windows® operation system. This function is most suitable for alarm display.

Memo pad function

Analog resistive switches allow you to use MONITOUCH as a memo pad for hand writing. You can draw a picture or a message on the display for use as a message board at production sites.

High-speed accelerator and algorithm ensure speedy, high-quality displays as well as higher usability in panel operation.

V8 series has drastically improved the processing capacity for drawing, calculation and communication in terms of smooth drawing and quick response.

Speedy drawing

V8 is equipped with a high-speed graphic accelerator, which improves speed for drawing graphics and characters.

High-speed communication

High-speed communication with PLCs is possible. By improving communication efficiency, the cycle speed can be shortened even when linked with more than two PLCs.

Quick response

Switch response speed has been shortened by efficient data processing and task assignment.

Communication Features

Multi-communication using the gateway function

Is capable of the connection with up to eight devices by combining Ethernet and serial communication. More advanced and expanded network can be now realized.

Connectable with up to eight different kinds of devices and different manufacturers' PLCs

8-way communication

A combination of Ethernet (eight protocols) and serial communication (three protocols) allows the 8-way communication, which enables connection among a V8 and up to eight kinds of devices consisting of PLCs and peripherals of different manufacturers.

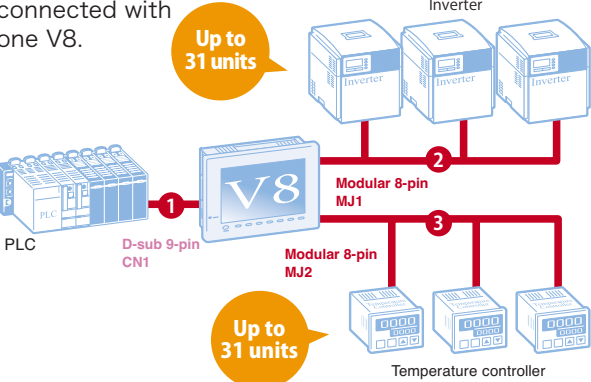

- Simultaneous communication and data transfer with eight kinds of devices
- Simultaneous monitoring and operation of multiple PLCs and peripherals
- Linkage between a V8 and various devices on the LAN network using the gateway function

Network Examples

Example 1 Serial connection (three ports)

Making a network linked with various automation devices

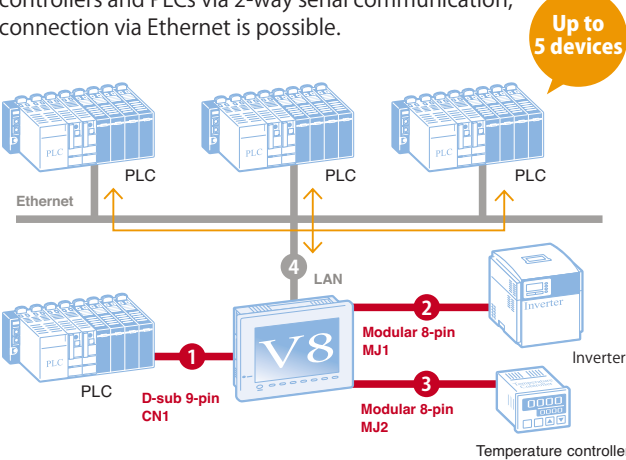

PLCs and peripherals of up to three kinds of units can be connected by serial connection. Even though two or more types of temperature controllers and inverters are used, they can be connected with one V8.

Example 2 Serial connection and Ethernet

Integrated management of up to eight kinds of devices

In addition to conventional connection with temperature controllers and PLCs via 2-way serial communication, connection via Ethernet is possible.

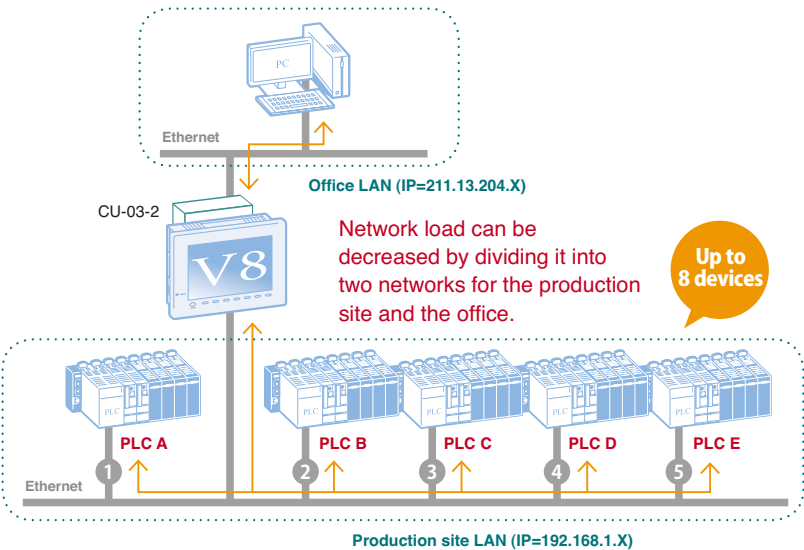

Example 3 Ethernet First in Industry

Used as a gateway for different types of networks

V8 can connect with eight kinds of PLCs via Ethernet. In addition, it can be used as a gateway with another network by adding an Ethernet port using the optional unit (CU-03-2).

For example, data can be transferred between a production site and the office freely by using a V8. V8 works as the gateway of multiple networks of the production site and the office without increasing data load on the networks.

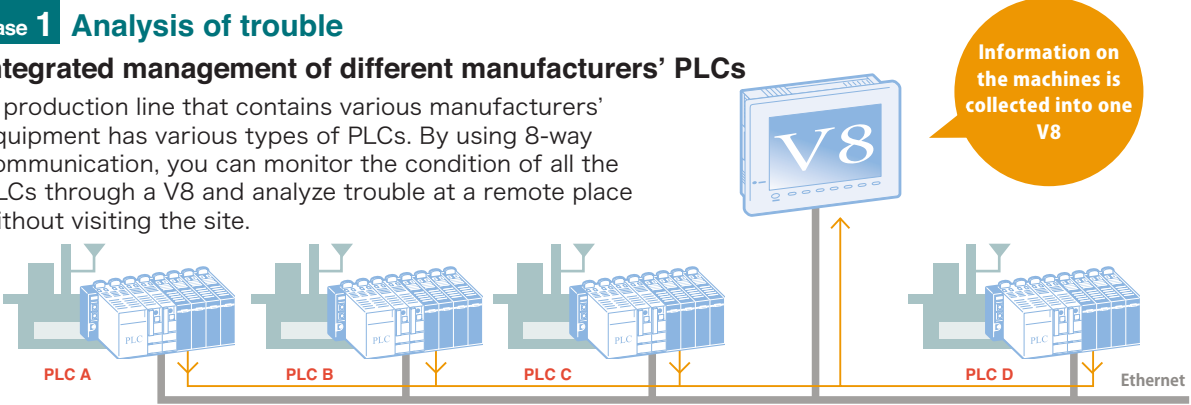

A variety of ingenious uses

8-way communication offers various functions and boosts your convenience

case 1 Analysis of trouble

Integrated management of different manufacturers' PLCs

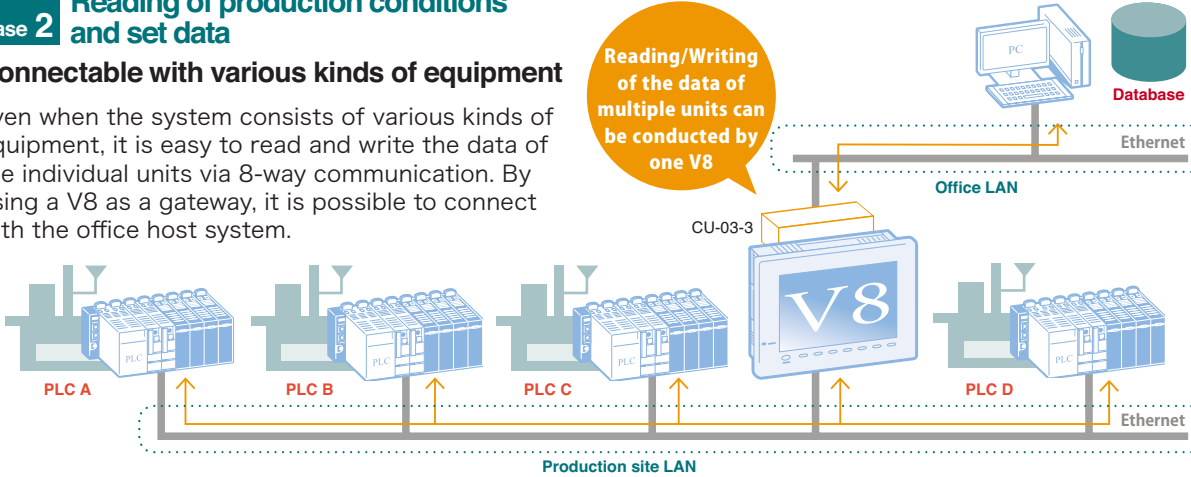

A production line that contains various manufacturers' equipment has various types of PLCs. By using 8-way communication, you can monitor the condition of all the PLCs through a V8 and analyze trouble at a remote place without visiting the site.

case 2 Reading of production conditions and set data

Connectable with various kinds of equipment

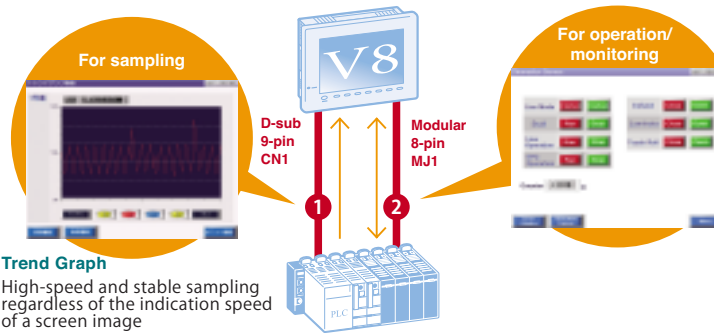

Even when the system consists of various kinds of equipment, it is easy to read and write the data of the individual units via 8-way communication. By using a V8 as a gateway, it is possible to connect with the office host system.

case 3 Real-time indication of information

High-speed data sampling

A V8 is connected to a PLC via two communication lines: one for operation/monitoring, and the other for sampling, a setup that enables high-speed and stable sampling.

Expandability (USB master/slave)

High compatibility with peripherals makes for more user-friendliness

All models are equipped with two types of USB interfaces fitted as standard feature.

High-speed transfer of large-volume data and easy connection to printers

Slave (USB-B)

PLC Ladder Program Transfer

Available in summer 2008

PLC ladder programs can be written or monitored with your PC through the USB port of V8. High-speed ladder transfer is possible.

Slave Master

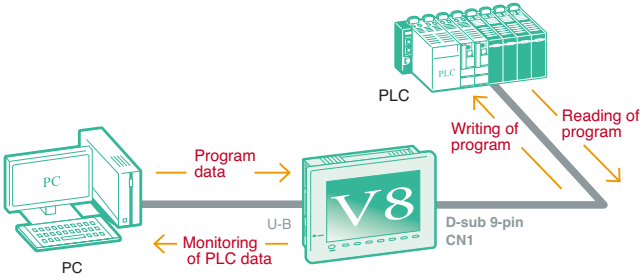

High-speed Transfer of Screen Data

Large-volume screen program edited by "V-SFT" configuration software can be downloaded and uploaded at high speed.

Compatible with PictBridge Printers

V8 is compatible with PictBridge printers. With PictBridge-compatible printers, production data such as daily and monthly reports can be printed out easily.

Compatible with PC peripherals including a USB keyboard and a USB mouse

Master (USB-A)

Card Reader/Writer

Connection with our "USB-CFREC" or commercial CF card readers/writers increases the versatility.

USB Interfaces Fitted on the Front

Optional interfaces "UA-FR" and "UB-FR" enable USB ports to be fitted on the front of the display for easy access.

Compatible with USB Keyboard

In addition to conventional software keyboards, a USB keyboard can be connected, which facilitates the entry of long product numbers and code numbers.

Compatible with USB Mouse

PC operation

By installing an optional RGB input unit "GU-01", "GU-10" or "GU-11", PC screen can be displayed on V8. You can operate the PC screen using a USB mouse.

Output on Large Displays

By installing the optional RGB output unit "GU-02", V8 screen program can be displayed on a large screen and it can be operated using a USB mouse.

Expandability (CF Card)

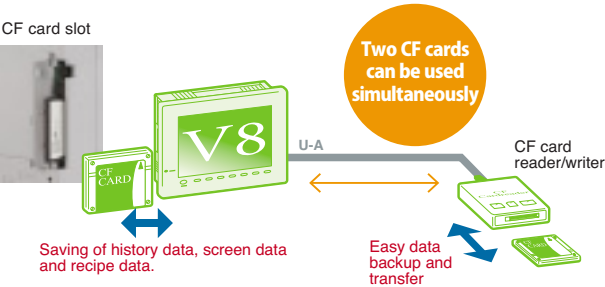

For superior information management

Two-drive system for versatile uses of CF cards

CF card interface and USB reader/writer

Equipped with Two Drives

In addition to the built-in CF card interface, MONITOUCH is equipped with a USB interface for a CF card reader/writer, which can be used simultaneously. Since CF card data can be copied to another card while V8 is being used, the V8 performance will not be inhibited. These functions expand the versatility of MONITOUCH.

Built-in Drive for Constant Use

case 1 Recipe Data

Production conditions can be saved in a CF card in CSV format. For preparation of production, data can be read out from a CF card and written in the PLC. It is also possible to read out data from PLC.

case 2 Sampling

Production data and alarm history can be sampled and saved. Since the data is saved in CSV format, it can be easily edited in Excel.

case 3 Screen Data Transfer

Because screen data can be saved on a CF card and read into V8 at a production site by means of a CF card reader/writer, there is no need to bring your PC.

case 4 Data Delivery

While using a CF card as a built-in drive, the card data can be copied to another CF card via the USB interface. Sampling data and recipe data can be backed up easily while keeping the CF card in the slot.

PC-friendliness

Compatible with FAT32

Available in summer 2008

FAT has some limitations. For example, a file name cannot exceed eight characters in length, and extensions must be within three characters. FAT32 allows a data file to have a longer file name, which improves compatibility with PCs.

Impressive Screen

Screen program capacity can be increased by means of a CF card

A CF card can be used as an extension unit for editing the screen. You can design an impressive screen freely without having to worry about data capacity.

Easy Configuration 1

Highly functional switches

Switches with various functions are standardized. No macro or PLC ladder programming is required.

Various switches that meet the individual needs

Multi-output

In order to meet diversified needs, switches with various functions are installed.

Multi-output memory
Output up to 16 positions

Switches have a multi-output function. Turning on just one switch makes the other switches turn off. It is also possible to output bit signals up to 16 positions.

For example, when you turn on one switch, the others turn off simultaneously.

Setting the switch timing freely
ON delay

It is possible to set switch functions such as requiring holding down the button for a certain time. This function prevents a false operation of the switch.

Setting the switch timing freely
OFF delay

Switch output is retained for a certain time after reset of the switch.

Indication depends on the value

In addition to the bit ON/OFF status, it is possible to set various switch conditions according to the value.

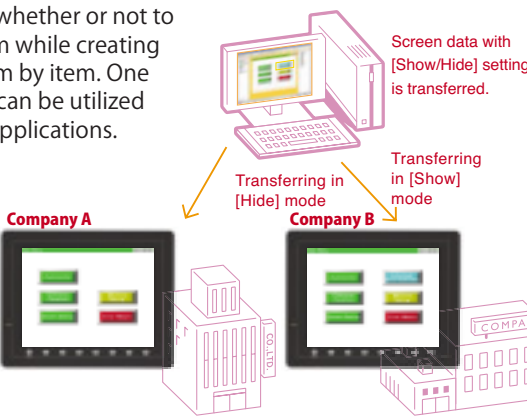

Available in summer 2008

Indication according to individual production sites needs

Conditional Visibility
Static conditional visibility

You can set whether or not to show an item while creating a screen, item by item. One screen data can be utilized for different applications.

Conditional visibility according to the security level

The display can be arranged according to security level. The security level is controlled by passwords. For example, different displays are shown for a maintenance engineer and an operator.

Available in summer 2008

Different indication according to the security level

* The above screens are subject to change as development progresses.

Dynamic conditional visibility

Whether items are indicated or not is automatically determined according to the memory condition.

Easy Configuration 2

Convenient functions to meet users' demands

Flash ROM, a large capacity of SRAM and many other functions for more user friendliness

High-capacity memory facilitates screen design

12.5MB^{*1} Flash ROM

V8 has 12.5MB^{*1} Flash ROM as standard — twice^{*2} the capacity of our previous model. In addition, by saving data in a CF card, you can design the screen without caring memory capacity.

^{*1} SRAM capacity differs depending on the models. See Performance Specifications (P26, P27) for details
^{*2} Comparison with V7

For saving large-volume event history data

512KB^{*1} SRAM as Standard

The built-in SRAM capacity has been expanded to 512KB^{*1} — eight times larger than that of our previous model. The capacity for backup of sampling data, operation information, alarm information, etc. has been greatly increased to comply with the ISO standard for information management. The large memory capacity enables quick data processing.

^{*1} SRAM capacity differs depending on the models. See Performance Specifications (P26, P27) for details

Referring to operation history to analyze causes of error

Operation Log

The operation history for switches and values entered on MONITOUCH can be recorded in chronological order. After entering the registered password, you can refer to all the details of operation history, such as who the operator was, which operations were performed, and how the operations were conducted.

Available in summer 2008

Easy-to-make pop-up message

Pop-up Window

Pop-up window is standardised. No programming or individual message edit is required for making a dialog such as an alert.

For easy communication between production sites and the office

Memo Pad Function

V8 can be used as a memo pad for communication between production sites and the office as easily as the telephone or e-mail. Display data, which is entered by means of the keyboard or handwriting, can be transferred to PCs in the office or other V8 via Ethernet.

Available in summer 2008

For communication between a production site and the office

Configuration Software [V-SFT]

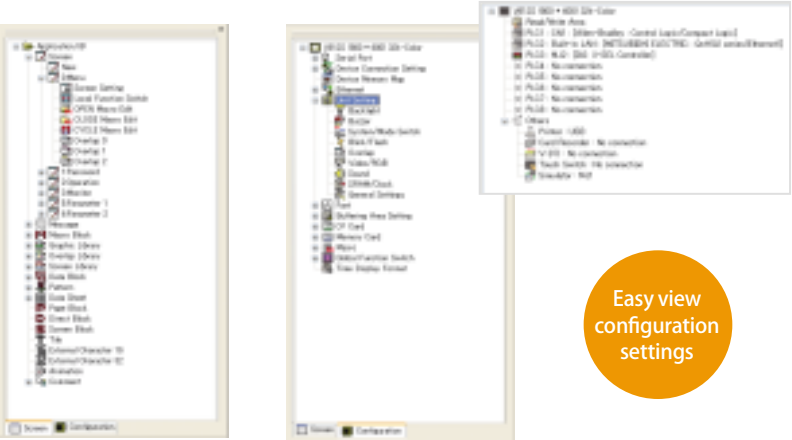

New V-SFT for easy screen configuration

Multiple windows provides immediate access to all application data.

Overall View of All the Devices

Project View ①

- System tree diagrams show the configuration of files and screens in the entire system.
- Easy viewing and modification of the contents and configuration of each block

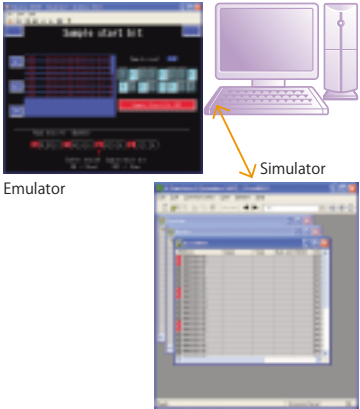

Easy view configuration settings

[Screen] and [Configuration] windows are easily switched by clicking tabs.

Quick Debugging on Your PC

Emulator for Easy Debugging

With the emulation of V-SFT Ver.5, data debugging is possible on your PC without V8 or PLC.

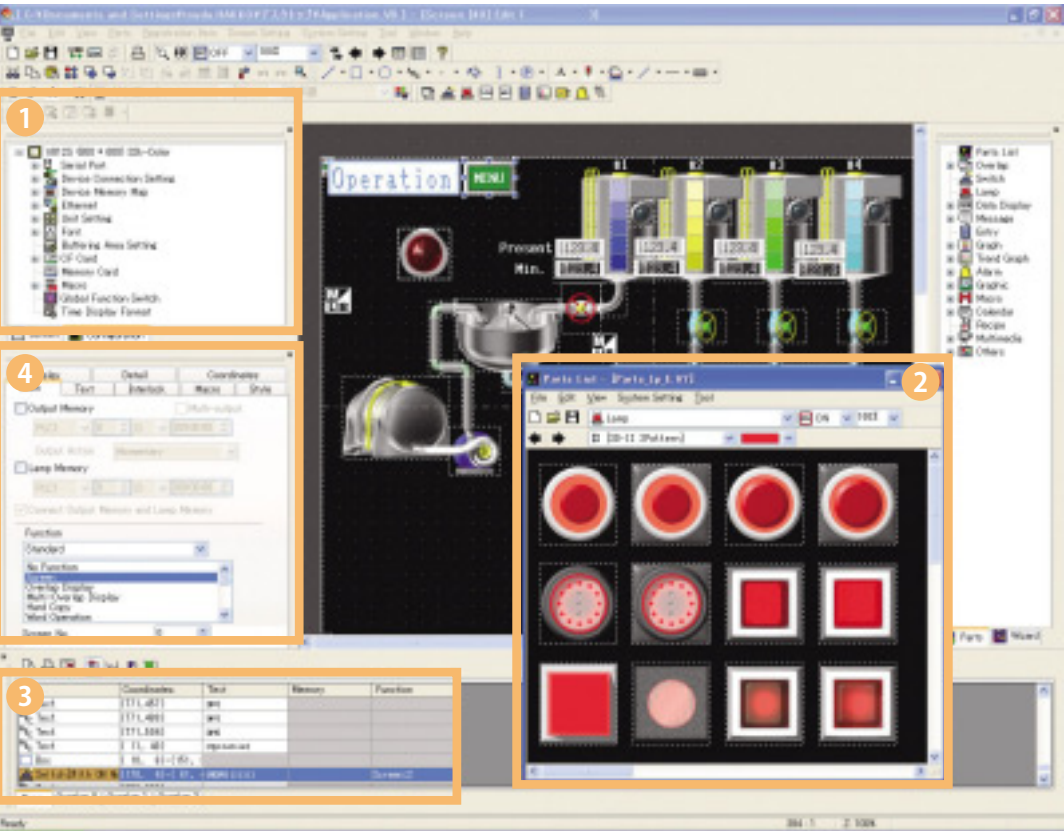

MONITOUCH V-SFT Ver. 5

V-SFT Requirements

PC	PC/AT compatible machine with Windows
OS	Windows 98/ Me/ NT Version 4.0/ 2000/ XP/ XP 64 edition/ Vista 32bit*
CPU	Pentium III 800 MHz or higher (Pentium IV 2.0 GHz or higher is recommended.)
Memory	512 MB or more
Hard disk	For installation: 850 MB or more available space
CD-ROM Disk drive	24 times or faster
Display	Resolution of 1,024 × 800 (XGA) or higher
Color indication	High color (16 bit) or higher

* When installing in Windows NT Ver.4/ 2000/ XP/ XP 64 edition/ Vista 32bit, administrator authority is required.

Quick Arrangement with Component Parts

Parts View ②

- Various parts are listed for each item.
- Select a part, and drag & drop it on the configuration window.

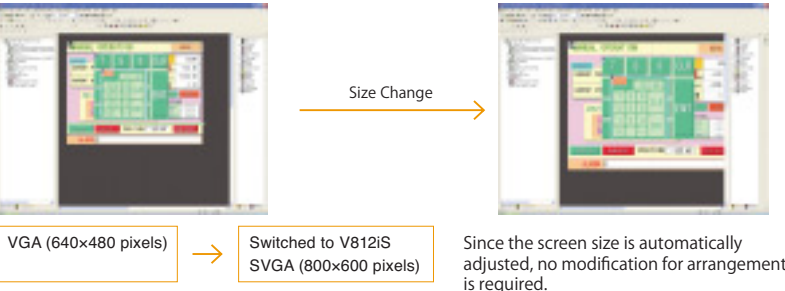

Multiple parts are integrated into one component part. For example, a component part for alarm display can be selected from the list and arranged easily only by drag and drop.

Easy and Speedy Display Configuration

Auto Size Change

When using screen data from a panel with different screen resolution, screen size is automatically adjusted to your selected model.

Convenient Item View ③

Direct editing

Memory condition, coordinates, switch names can be entered in the item view. Memory address, position, and text can be directly entered in the item list.

Easy editing by selecting items

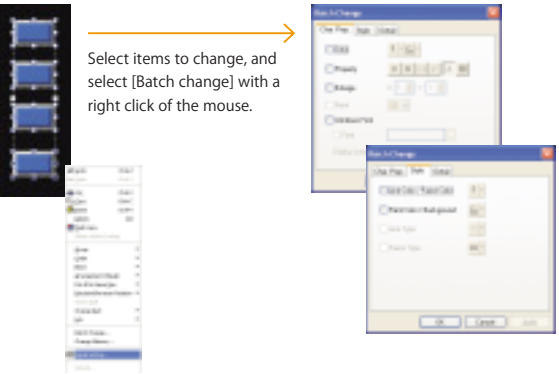

Coordinate items view

Utilize [Display setting] in the item list to minimize or maximize item properties in the windows. This system facilitates efficient management of information.

Additional items for batch change

More items can be changed simultaneously by batch change.

Enhanced Batch Change Functions

Batch change with the item view ④

Multiple items can be selected to change the setting simultaneously on the item view window.

<Available items>

Switches, lamps, values, characters, messages, bar/circle graphs, panel meters, closed-area/statistical graphs

Component Parts

“Component Parts” facilitate screen configuration.

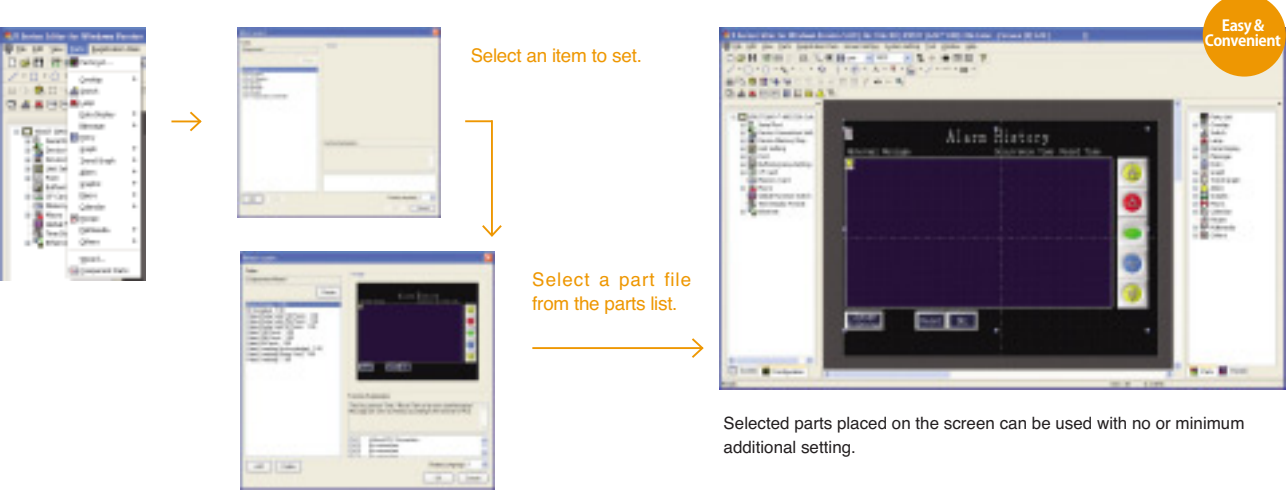

Convenient tool assists you in creating functional screens instantly.

Quick screen configuration using integrated “Component Parts”

Component Parts

First in Industry

In “Component Parts,” various functions and macros have been arranged according to purpose. You can create a functional screen instantly by simply selecting a “Component Parts” from the parts list and arranging it on the screen.

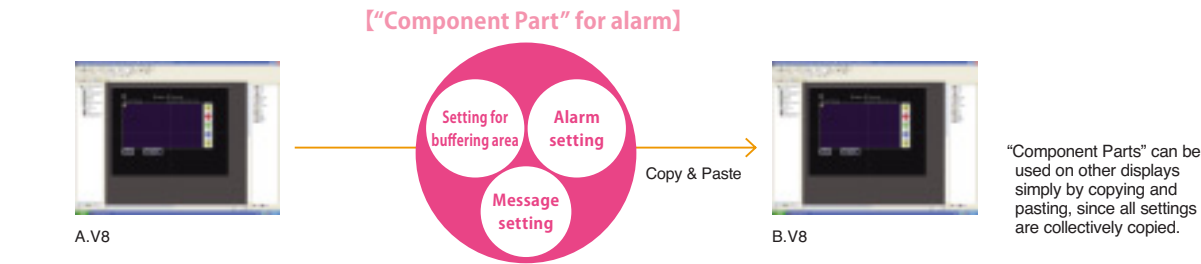

Point 1 Easy Screen Configuration

You can create multifunctional screens using integrated “Component Parts.” When arranging on a screen that contains other messages or setting windows, a “Component Part” can be used regardless of overlapping of settings or windows.

Point 2 Easy Utilization of Resource

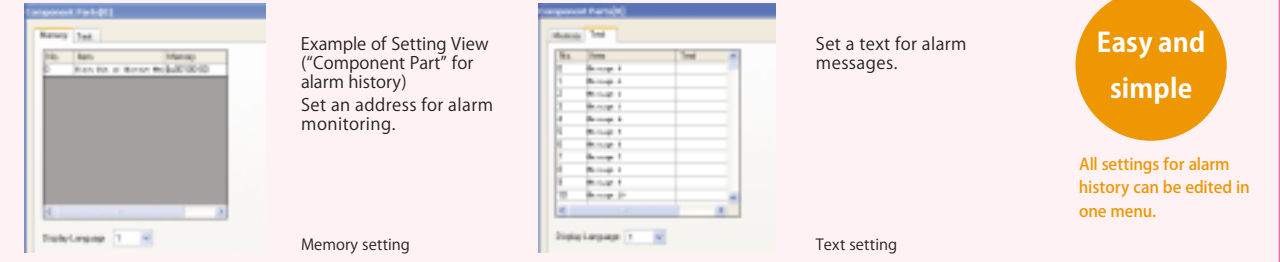

“Component Parts” contain all necessary settings for operation, so they don’t need any additional settings when used on other displays. They can be reused simply by copying and pasting.

Point 3 Simple Setting View

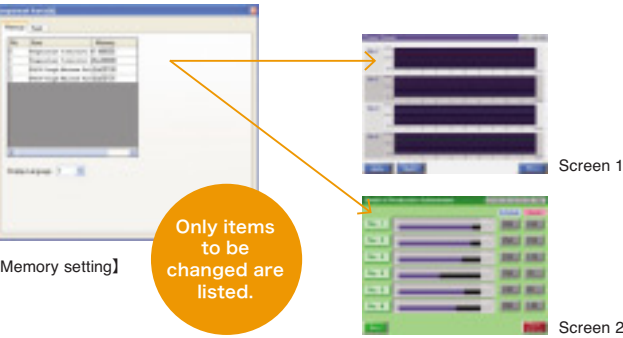

After arranging “Component Parts,” they can be easily used simply by setting addresses and text.

Example of Setting View (“Component Part” for alarm history)

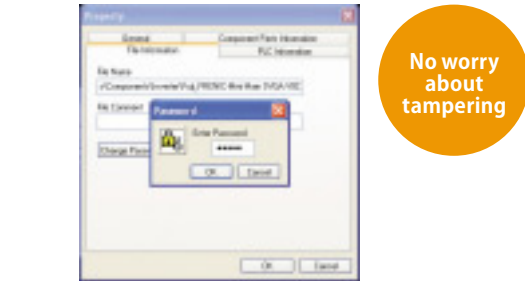

Point 4 Batch Change of Addresses/Text

When the same address or text is used for multiple screens, all the settings can be changed simultaneously on the setting view simply by registering it in the address/text table of a “Component Part.”

Point 5 Authorization by Passwords

Setting a password for a “Component Part” prevents the settings for the part from being changed by unauthorized persons. Customers can use a “Component Part” without having to worry about tampering of the setting.

Point 6 Various “Component Parts”

“Component Parts” with various functions are available. They can be selected from the parts list according to your purpose to configure displays promptly.

Examples of “Component Parts”

Expandability via MES*/ Ethernet

Supporting the construction of advanced MES

V8 networking promotes the integration of sales, production management and manufacturing at low cost.

Reinforcing your production management through connection to the database

MES* interface function

Data for production records, defect quantity, error causes and various kinds of information can be sent to the MES database server via V-Server in SQL. Communication with the database is possible without a gateway PC or complicated programming.

No Programming Required

Data can be saved in the database server by simple setting on V-SFT — no programming is required.

Preventing data loss

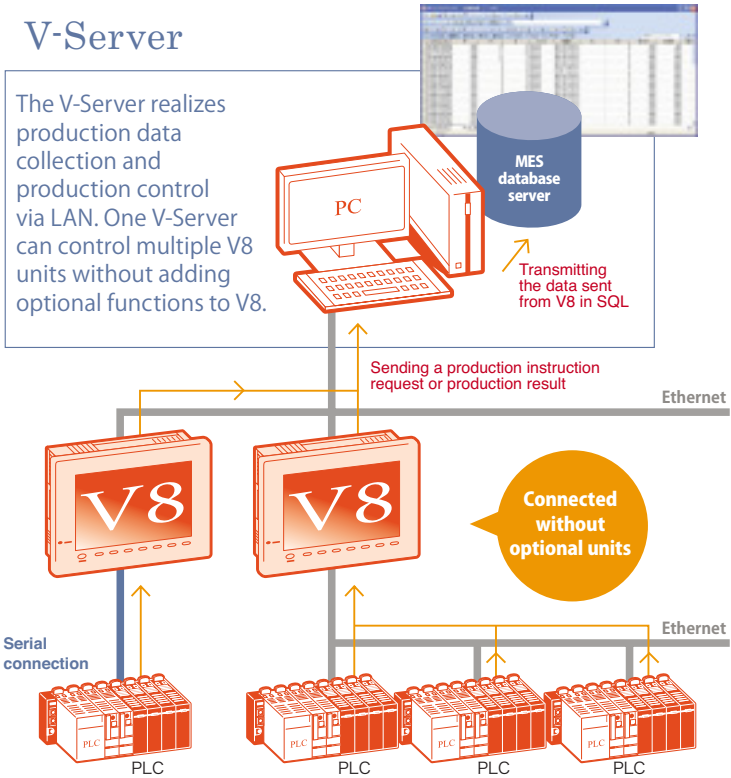

All data transferred to the database is saved with the error log so that it is completely secure.

Decreasing system load

Data can be transferred to the database server when conditions are fulfilled. The server does not need to keep monitoring production, so the load on the system can be decreased.

V-Server

The V-Server realizes production data collection and production control via LAN. One V-Server can control multiple V8 units without adding optional functions to V8.

* [MES]: The "Manufacturing Execution System" is for optimizing product quality, product quantity, delivery date, cost, etc. in the management/control of production sites.

Extended functions using Ethernet

FTP Server Function

The upstream PCs can read/write the data from/on V8. The data is transmitted in universal communication protocol and no additional application software is necessary.

Remote Desktop Function

The screen of the server PC can be displayed on V8 via Ethernet. Operation manuals saved in the PC can be checked on V8, which is a feature that decrease operation errors.

Under Development

Replay of Web Camera Images (Motion JPEG)

Images captured by a web camera can be displayed on V8. This function helps to monitor the entire production line.

Available in autumn 2008

Document Display

With V-SFT ver.5, you can easily display various kinds of documents such as pdf files on V8.

Application software for low-cost connection of the office to the production site TELLUS and V-Server

Enhancing production performance with remote operation and data collection functions

With V-Server, you can monitor and control machines that are operated at a remote production site, even overseas, from your office via the Internet/Ethernet at low cost. By combining the network function and the server function of Ethernet and the Internet, it is possible to conduct alarm message transmission, remote monitoring, and collection and analysis of errors. Your production efficiency can be improved by preventing trouble and decreasing the downtime of your machines.

Main features

- Collecting and saving PLC data
- Collecting and saving sampling data of V8
- Controlling and transferring recipe data
- Monitoring alarm condition and sending alarm mail
- Controlling data with PC application software by means of DDE function
- Transferring V8 screen program via Ethernet

For further information, please refer to our TELLUS and V-Server catalog.

Option Units

Optional units that expand V8's performance

Various units for greater expandability and usability

Expansion/ Communication Units

● Expansion units

GU-00(Video input + sound output unit)

Displays images from a video camera on V8 and outputs sound files through external speakers.

GU-01(RGB input + sound output unit)

Displays PC images on V8 and outputs sound files through external speakers.

GU-02(RGB output + sound output unit)

Displays images of V8 on PC display and outputs sound files through external speakers.

GU-03(Sound output unit)

Outputs sound files through external speakers.

GU-10(Video input(2ch) + RGB input)

Displays images from video cameras and PC images on V8 simultaneously.

GU-11(RGB input(2ch))

Displays RGB images such as PC images through two channels on V8 simultaneously.

DU-10(V806)

Compatible with a D-Sub9pin/CF card

Application Software

● Configuration software

V-SFT-5(Ver.5)

For Windows98/Me/NT Version4.0/2000/XP/XP 64 Edition/Vista 32bit

Cables

Type	Configuration	Connected to
V-CP	RS-232C Modular 8-pin  D-Sub 9-pin  Length: 3 m	PC
V6-BCD	RS-232C Modular 8-pin   Length: 3 m	Bar code reader
V6-MLT	RS-422 Modular 8-pin   Length: 3 m	MONITOUCH V8/V7/V6 series
V6-TMP	RS-232C/485 Modular 8-pin   Length: 3, 5 or 10 m	Temperature controller and inverter etc.
UA-FR	  Length: 1000 ± 50	USB-CFREC Card reader/ writer
UB-FR	  Length: 1000 ± 50	PC PictBridge Printer

● Communication units

XX	Compatible network	XX	Compatible network
00	OPCN-1 ¹	04	PROFIBUS-DP
01	T-Link	06	SX bus
02	CC-Link ¹	07	DeviceNet ¹
03-3	Ethernet ¹	08	FL-net ¹

Connected to various networks. Multiple V8 panels can be connected to one PLC. Other devices can be linked to the network, improving system's cost-effectiveness.

¹ Under development

Optional units

USB-CFREC
(USB ports for CF card recorder)

Used for recording or reading data onto or from a CF card. Fitted on the front of the panel.

TC-D9 (Terminal converter)

Connects V8 with other units via RS-422/485 terminal.

CREC (Card recorder)

Used for recording data onto a card for back-up. Also used for recording data by memory manager or data logging functions.

V-MDD (ACPU/QnACPU/FXCPU dual port interface)

Used to double the port of the connector for programmer units. Useful when connecting to ACPU/QnACPU/FXCPU(MITSUBISHI) directly.

V7-BT (Battery)

Lithium battery for V8 series

V8xx-GS/V8xx-GSN10

Protection sheet for panels: 5 sheets per set. N10 is a non-glare type sheet. See P29 for details.

V8xxx-FL

Backlight for V8
See P29 for details.

Panel Adapter

Used when fitting V8 into V4/GD-80/GD-65/GD-64 panel cutout.

Option List

Optional units that expand V8's performance

Expansion / Communication units

Product Warranty

To the purchasers of Hakko Electronics products:

The warranty of this product is as follows, unless there are special instructions that state otherwise in the quote, contract, catalog, or specifications at the time of the quote or order.
The purpose or area of use may be limited, and a routine checkup may be required depending on the product. Please contact the distributor from which you purchased the product, or Hakko Electronics for further information.
Please conduct inspection of the product promptly upon purchase or delivery. Also, please give sufficient consideration to management and maintenance of the product prior to accepting it.

1. Period and Coverage of the Warranty

- 1-1 Period
- (1) The period of the warranty is effective until twenty-four (24) months from the date of manufacture printed on the plate.

(2) The above period may not be applicable if the particular environment, conditions or frequency of use affects the lifetime of the product.

(3) The warranty for the parts repaired by Hakko Electronics' service department is effective for six (6) months from the date of repair.
- 1-2 Coverage
- (1) If malfunction occurs during the period of warranty due to negligence on the part of Hakko Electronics, the malfunctioning parts are exchanged or repaired free of charge at the point of purchase or delivery. However, the warranty does not apply to the following cases:

1) The malfunction occurs due to inappropriate conditions, environment, handling or usage that is not specified in the catalog, instruction book or users' manual.

2) The malfunction is caused by factors that do not originate in the purchased or delivered product.

3) The malfunction is caused by another device or software design that does not originate in a Hakko Electronics product.

4) The malfunction occurs due to an alteration or repair that was not performed by Hakko Electronics.

5) The malfunction occurs because the expendable parts listed in the instruction book or catalog were not maintained or replaced in an appropriate manner.

6) The malfunction occurs due to factors that were not foreseeable by the practical application of science and technology at the time of purchase or delivery.

7) The malfunction occurs because the product is used for a purpose other than that for which it is intended.

8) The malfunction occurs due to a disaster or natural disaster that Hakko Electronics is not responsible for.

(2) The warranty is only applicable to the single purchased and delivered product.

(3) The warranty is only valid for the conditions stated in (1) above. Any damage induced by the malfunction of the purchased or delivered product, including damage or loss to a device or machine and passive damage, is not covered by the warranty.

- 1-3 Malfunction Diagnosis
- The initial diagnosis of malfunction is to be made by the purchaser. The diagnosis can be conducted by Hakko Electronics or its delegated service provider with due charge upon the request of the purchaser. The charge is to be paid by the purchaser at the rate stipulated in the rate schedule of Hakko Electronics.

2. Liability for Opportunity Loss

Regardless of the time of occurrence, Hakko Electronics is not liable for damage caused by factors that Hakko Electronics is not responsible for, opportunity loss on the part of the purchaser caused by the malfunction of a Hakko Electronics product, passive damage, damage due to a special situation regardless of whether it was foreseeable or not, or secondary damage, accident compensation, damage to products that were not manufactured by Hakko Electronics, or compensation towards other operations.

3. Period for Repair and Provision of Spare Parts after Production is Discontinued (Maintenance Period)

Discontinued models (products) can be repaired for seven (7) years from the date of discontinuation. Also, most spare parts used for repair are provided for seven (7) years from the date of discontinuation. However, some electric parts may not be available due to their short life cycle. In this case, it may be difficult to repair or provide the parts during the seven-year period. Please contact Hakko Electronics or its service providers for further information.

4. Delivery

Standard products that do not entail application setting or adjustment are regarded as received by the purchaser upon delivery. Hakko Electronics is not responsible for local adjustments and test runs.

5. Service

The price of the delivered or purchased products does not include the service fee for the technician. Please contact Hakko Electronics or its service providers for further information.

6. Scope of Application

The above contents shall be assumed to apply to transactions and product use in the country where a Hakko Electronics product is purchased. Please consult your local supplier or Hakko Electronics for details.
